CIRCUIT APPLICATION

Sylvania 6A8 is an electron-coupled pentagrid converter tube of the metal type construction. It is designed for the same service as the glass Type 6A7 and has characteristics which closely parallel those of that tube. The principal differences appear in the values of some of the interelectrode capacitances.

Under Types 6A7 and 2A7 there appear detailed circuit application notes on the use of these combined mixer and oscillator tubes. Refer to those notes in conjunction with Type 6A8 applications.
