Cooling: radiation. When the tube is used at frequencies above 150 Mc/s it may be necessary to direct a low velocity air flow on the bulb and the anode seals. Temperature of bulb and anode seals max. 200 °C. Temperature of bottom pin seals max. 180 °C

Refroidissement: radiation. Si le tube est utilisé aux fréquences supérieures à 150 Mc/s, il peut être nécessaire de diriger un léger courant d'air sur l'ampoule et sur les scellements des sorties d'anode.

Température de l'ampoule et des scellements des sorties d'anode max. 200 °C

Température des scellements des broches du fond max. 180 °C

Kühlung: Strahlung. Wenn die Röhre bei Frequenzen höher als 150 MHz benutzt wird, kann ein Luftstrom auf den Kolben und die Anodenverschlüsse notwendig sein.

Temperatur des Kolben und der Anodenverschlüsse max. 200 °C

Temperatur der Bodenstiftverschlüsse max. 180 °C
